

ZAWAR ZOHAIB

Data Science Postgraduate · Statistician · Co-Founder, Gwent Digital

Newport, Wales NP20 2DJ | +44 7405 376702 | zawarzohaib096@gmail.com | zawar-portfolio.vercel.app

Right to work: UK Student Visa (20 hrs/week in term time, full-time during university holidays)

PROFESSIONAL SUMMARY

MSc Data Science candidate at UWE Bristol with a BS in Statistics and 3+ years of experience turning real-world data into decisions. I have collected data door-to-door across 500+ households for a national government programme, cut emergency blood-donor matching time by 40% through a database redesign, and built a hybrid machine-learning recommender on 37,000+ reviews. As co-founder of Gwent Digital, a Newport digital agency, I analyse small-business data, find the cause of the problem, and scope the tools and strategy that fix it. Seeking data analyst, research or data science roles in Newport, Cardiff, Bristol or remote across the UK.

CORE SKILLS

Data Science & ML: Python (pandas, scikit-learn) · Machine learning · NLP (TF-IDF, Word2Vec, BERT) · Recommender systems (content-based, collaborative filtering / SVD) · Model evaluation (F1, Precision@K)

Statistics & Research: R · SPSS · Minitab · Regression analysis · Hypothesis testing · Survey design · Structured & door-to-door interviewing · Data cleaning & quality control

Tools & Tech: Excel (VLOOKUP, Pivot Tables) · Google Sheets · Database administration · React (basic) · Claude / LLM APIs · Prompt engineering · MS Office

Project & Business: Project scoping & PRD writing · Stakeholder and client management · Team training · Report writing · Data interpretation for non-technical audiences · GDPR awareness

Languages: English (B2 Upper-Intermediate) · Urdu / Hindi (Native)

PROFESSIONAL EXPERIENCE

Co-Founder — Gwent Digital Ltd

2026 – Present

Newport, Wales · Digital agency building websites, custom business tools and data-led growth strategies

- Co-founded a digital agency serving local small businesses in retail, phone repair and hospitality.
- Lead the data side of client work: analyse sales and customer data to trace a business problem to its cause before recommending a strategy.
- Scope client projects and write product requirement documents (PRDs), including a shop management system and a customer acquisition system for a phone repair retailer.
- Manage client communication, priorities and delivery timelines with a business partner.

Field Compliance Officer & Community Interviewer

2021 – 2023

Benazir Income Support Programme (BISP) · Government of Pakistan national poverty-alleviation programme

- Conducted structured door-to-door interviews across 500+ urban and rural households, collecting sensitive socioeconomic data used for national policy decisions.
- Maintained 100% data accuracy against government protocols through systematic verification, record auditing and on-site compliance checks.
- Designed and delivered financial-literacy sessions, translating complex policy into plain language for low-income families and improving programme participation.
- Built trust with community leaders to raise response rates on sensitive surveys; trained junior field staff in interview technique, ethical data handling and data-entry standards.

Data Administrator & Coordinator

2020 – 2021

Hayatian Blood Society · Volunteer-run emergency blood donation network

- Owned a live database of 1,000+ donor records organised by blood group, location and availability.
- Redesigned the data-retrieval workflow, cutting donor-to-patient matching time by 40% and speeding up emergency responses.
- Screened donors through outreach interviews and handled sensitive medical data under strict confidentiality standards.
- Coordinated volunteer teams across departments to meet urgent, time-critical requests.

KEY PROJECTS

Sentiment-Weighted Game Recommender — MSc Group Project, UWE

2026

Python · scikit-learn · TF-IDF · SVD collaborative filtering · Word2Vec · BERT

- Built the hybrid recommender: a TF-IDF content-based baseline combined with SVD collaborative filtering, re-ranked by sentiment predicted from 37,778 Steam reviews across 3,993 games, and evaluated with Precision@K.
- Team's Word2Vec + Random Forest sentiment model reached a macro-F1 of 0.89, outperforming fine-tuned BERT (0.80); investigated class imbalance and overfitting and defended the model choice with evidence.

Zawar Job — AI Career System (Personal Product Build)

2026

React · Claude (Anthropic) API · Prompt engineering

- Designed and built an AI job-application platform: an LLM agent that scores job descriptions against my profile (0–100), generates tailored cover letters and interview preparation, and tracks applications in a live pipeline dashboard.
- Wrote the product requirements document, system prompts and scoring framework end to end.

Predictive Student Performance Analysis

BS Statistics

R · Multiple regression · Statistical reporting

- Built a multiple-regression model identifying at-risk students with 85% predictive accuracy; delivered a written report with policy recommendations for educational institutions.

Online vs. Physical Learning — Comparative Study

BS Statistics

Survey design · Primary data collection · Hypothesis testing

- Led an end-to-end study comparing student engagement across learning modes: designed survey instruments, collected primary data and presented statistical findings.

EDUCATION

MSc Data Science — University of the West of England (UWE), Bristol

Jan 2026 – Jan 2027

Machine Learning · Statistical Modelling · Data Engineering · Research Methods

BS Statistics — University of Gujrat, Pakistan

2019 – 2023

Inferential Statistics · Regression Analysis · Research Methodology · SPSS · Minitab

AVAILABILITY

Monday and Thursday–Sunday · up to 20 hrs/week in term time · full-time during university holidays.
